

# SENSINACT, OPEN IOT PLATFORM FOR SMARTER CITIES

Dr. Levent Gürgen  
[levent.gurgen@cea.fr](mailto:levent.gurgen@cea.fr)

-  **Why Cities Need to be Smarter?**
-  **sensiNact, IoT Platform for Smarter Cities**
-  **Deployments in Europe and Japan**
-  **Summary and Perspectives**

## WHY CITIES NEED TO BE SMARTER?

### City bound

Percentage of world population living in cities

SOURCE: United Nations, Department of Economic and Social Affairs, Population Division

\*Projected

RICH CLABAUGH/STAFF

- More than half of the world population lives in cities
- Urban population percentage is around 75% in Europe

- On 2% of the earth's surface, cities use 75% of the world resources

Resources in civil infrastructure (water, energy, public transportation, parking spaces, buildings, roads, bridges, etc.) to be shared by the increasing population

=> direct consequences on the city life

# Energy

In Europe, **50%** of energy consumed today is imported – expected to reach **70%** by **2030**

# Water

Worldwide, up to **60%** of water is lost due to leaky pipes—to the tune of **US\$14 billion every year.**<sup>1</sup>

IBM

# TRANSPORT

In Europe and US, drivers spend **from 5 to 10 working days** per year **stuck in the traffic**

**City data sources**

A mind map diagram with a central red circle with a green border. Six lines radiate from this center to six peripheral circles. From top to bottom, these circles are: a green circle with a green border, a red circle with a green border, a white circle with a red border, a green circle with a green border, and a red circle with a red border. There are also several small red dots on the lines between the main nodes.

Heterogeneity/Interoperability: How to handle the numerous types of devices, protocols, standards?

Scalability: How to handle the big number of connections/big data coming from millions of devices?

Dynamicity: plug&play, self-configuration, self-management, self-mathcmaking

Dependability: rapid prototyping yet reliable dependable applications

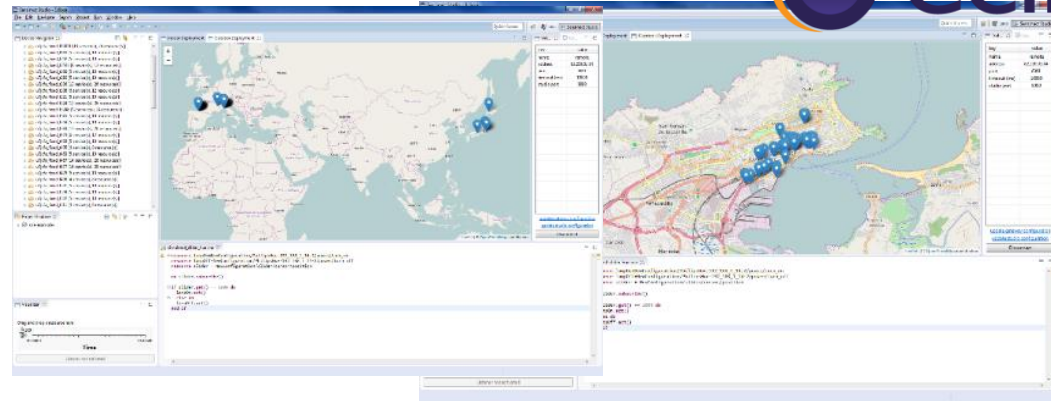

Security and privacy

# SENSINACT – IOT PLATFORM FOR SMARTER CITIES

sensiNact Studio

Tool for **rapid and dependable** application building

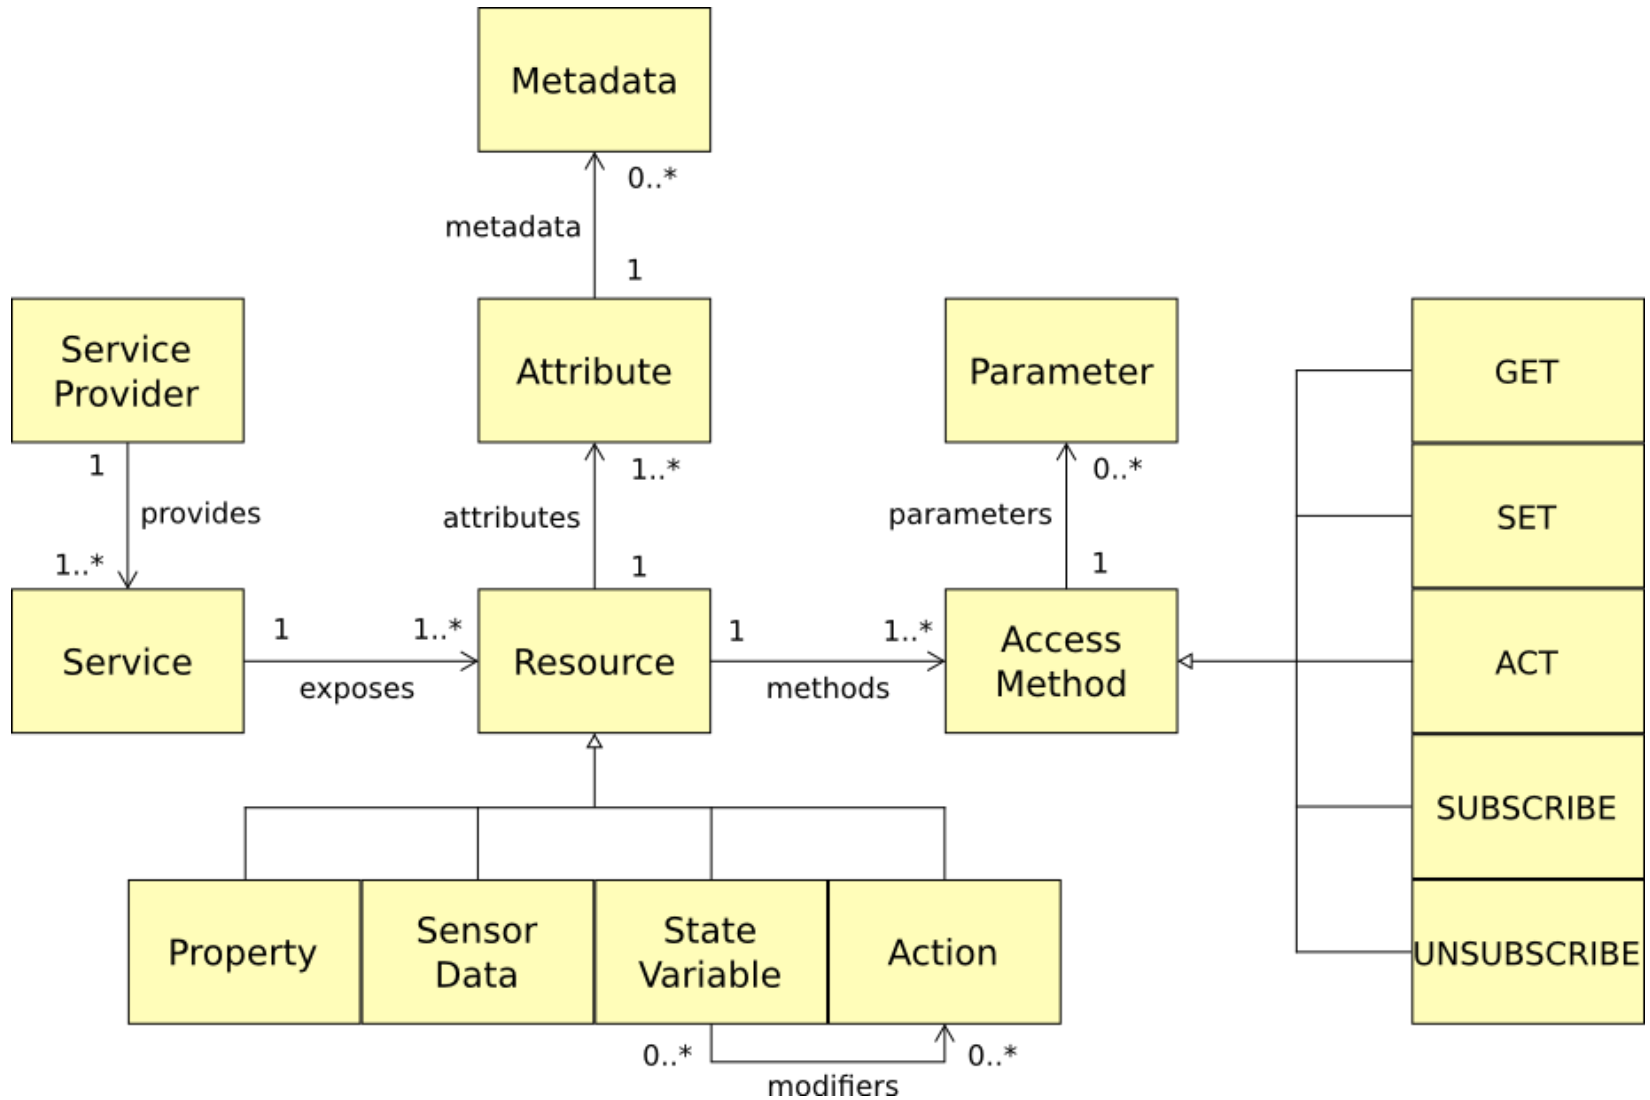

Various **northbound** protocols

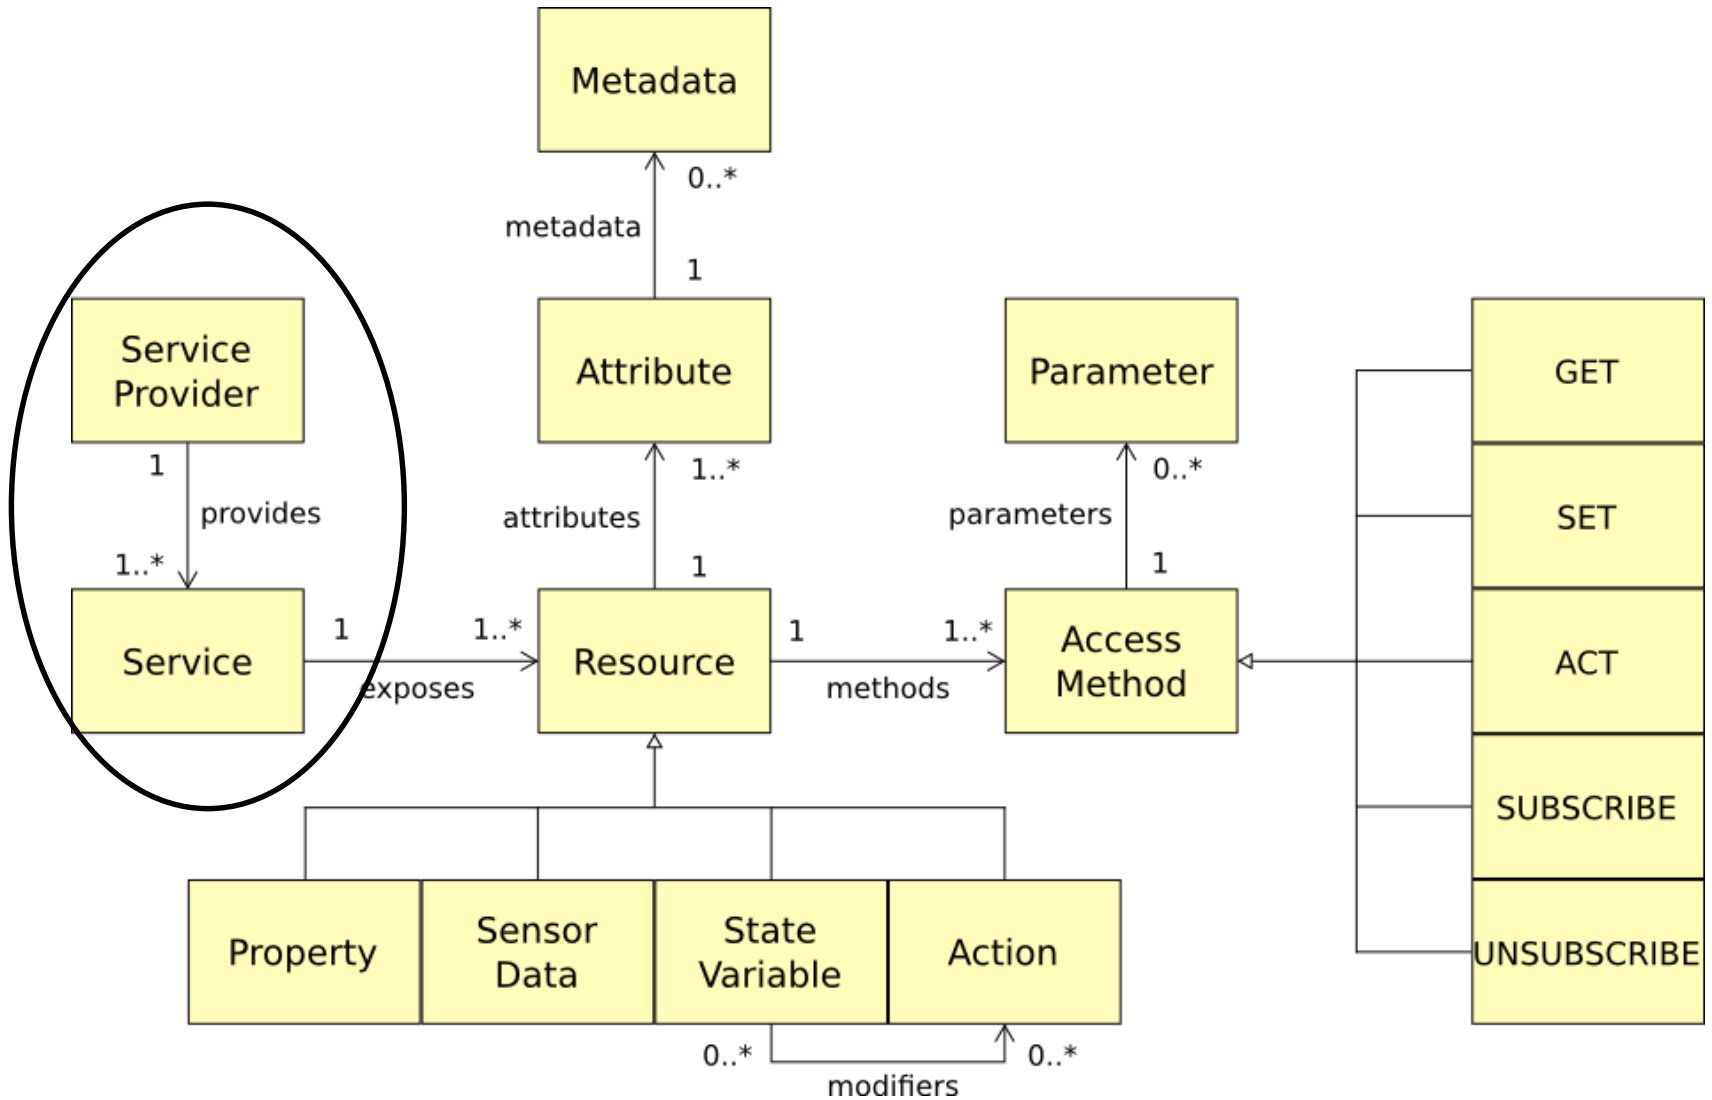

Homogeneous Access  
- to **real-time data**: on-demand, periodically, event-based  
- **historic data**

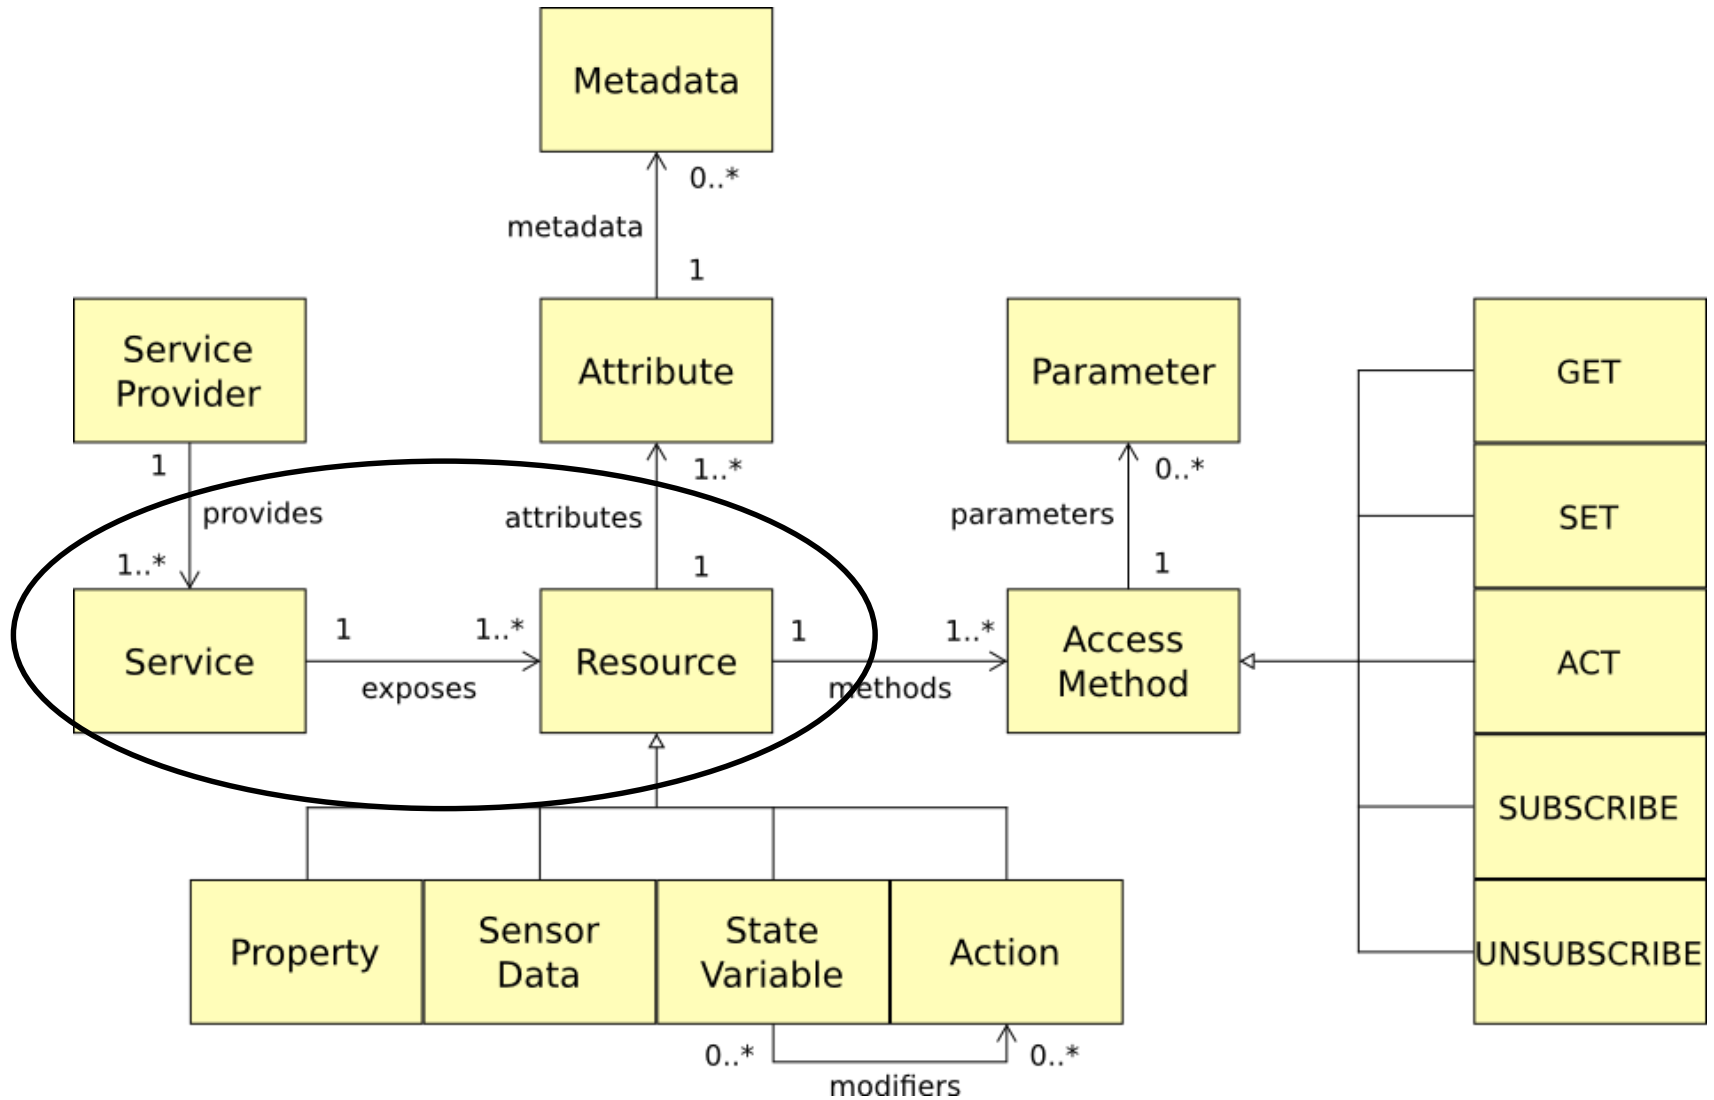

Various **IoT** protocols and platforms

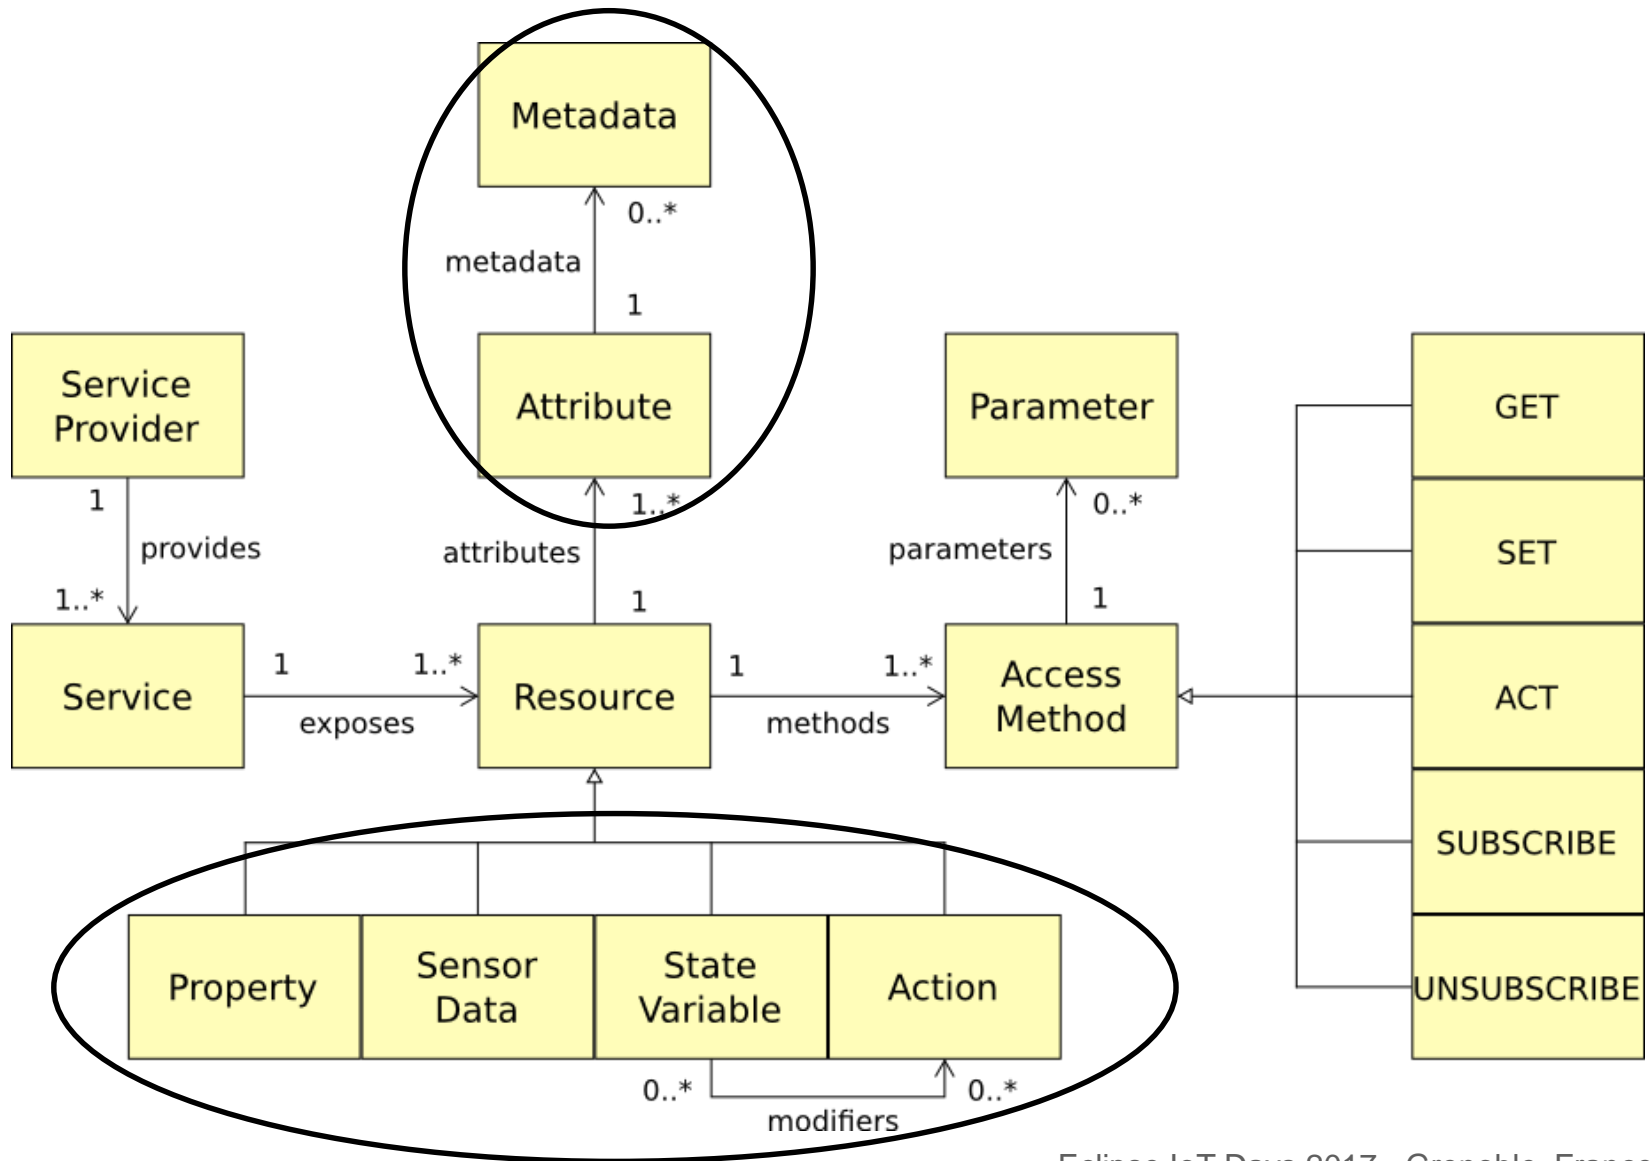

**Heterogeneous IoT** devices and platforms

# SENSINACT STUDIO - DEVELOPMENT ENVIRONMENT

DEVELOPPERS

develop, deploy, monitor, manage

The screenshot displays the Sensinact Studio development environment. It features a central map view with several blue location pins. To the left, there is a code editor with a list of Java code snippets. Below the code editor, a 'Navigator' pane shows a tree view of ECA Rules, including categories like KitchenTV, LocationDevice, WebcamDevice, RaspGpioDevice, LivingRoomTV, PowerService\_SmartPlug\_0, status, energy, voltage, power, location, TURN\_OFF, and AdminService\_SmartPlug\_0. At the bottom left, a 'Visualizer' pane shows a line graph of power consumption over time. On the right side, there is a console window displaying log output and a 'Project Explorer' pane showing the project structure.

- A DSL for building IoT applications based on Event Condition Action rules
- ON Event IF Condition DO Action

Eclipse IoT Days 2017 - Grenoble, France

**15 partners**  
**€7.2 M**  
**(€1.8 M)**

2 open calls  
36 months  
2015-17

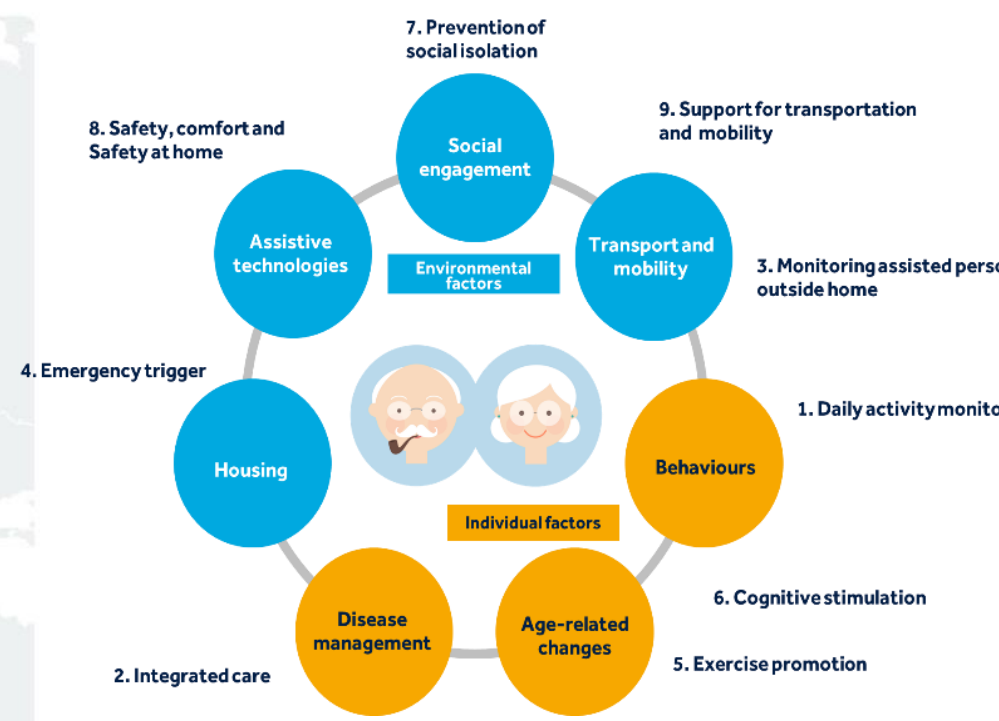

Organicity is inviting proposals for experiments to run in our three lead cities: Santander, Aarhus and London. The open call offers funding of up to 60.000 € to kick start your ideas or projects.

# ACTOVAGE PROJECT

# SENSINACT FEATURES

- **Plug&play:** Device as a Service Approach. Flexibility of adding/removing/updating devices with a minimum impact on the running platform.
- **Modular:** Modular development and deployment for enhanced system maintenance and evolution
- **Dependable:** sensiNact's formal data and service models facilitate reliable IoT applications development.
- **Scalable:** sensiNact's three layers architecture (device/gateway/cloud) allows distribution of data processing at different levels.
- **Easy&quick:** sensiNact's comprehensive data model and APIs help to rapidly build IoT applications.

## **sensiNact smart city platform joins to Eclipse community!**

<https://projects.eclipse.org/proposals/eclipse-sensinact>

**Believing in open platforms for smarter cities?  
Interested in joining the forces?  
Just let us know!**

[levent.gurgen@cea.fr](mailto:levent.gurgen@cea.fr)

# Defining cities of the future together

- ▶ Each city is unique!
- ▶ Yet, today's worldwide economic, social and environmental **challenges are related**
- ▶ Many **technical requirements are common**, they should be addressed **globally**.
- ▶ Important to **mutualize resources, cooperate** and **exchange lessons learnt and best experiences** among different stakeholders and ecosystems
- ▶ **Openness is the key!**
  - ▶ Giving more clout to citizens
  - ▶ Smarter citizens => smarter cities

# Urban Technology Alliance

---

- ▶ **Bring together various actors of the smart city ecosystem**
  - ▶ Cities, large and small industries, research centers and universities, non-profit organizations, etc.
  - ▶ Have the voice of each stakeholder for defining cities of the future, enabling cooperation and exchange of best practices.
  - ▶ Demand driven analysis of requirements
- ▶ **Join forces to provide necessary platforms and tools for building together the cities of the future**
  - ▶ Developer friendly APIs; interoperable, flexible, extensible data models; rapid and robust application development tools, etc.

# Defining cities of the future together

Large industry

Researchers

Cities

Startups/SMEs

# Objectives of Urban Technology Alliance

- ▶ Provide **direct contact between city authorities and solution developers** to identify real requirements for smarter urban environments
- ▶ **Provide open source platforms, components and tools** addressing the current and future technical challenges in urban environments.
- ▶ **One-stop showcase** for a comprehensible set of (integrated) smart city solutions by a multi-disciplinary stakeholders, tailored to specific needs of the member cities
- ▶ Provide **large networking possibilities**, between cities, SMEs/startups and with large corporations for exploring collaboration opportunities (funding by private-sector or public authorities such as EU H2020).
- ▶ Provide **increased visibility** to its members **at international scale**.
- ▶ **Create a business ecosystem** among the members to join the forces and build integrated end-to-end solutions and promote them worldwide.
- ▶ **Organize pilot deployments and testbeds** with the member cities for validation and promotion.
- ▶ Guidance to the cities from prestigious **neutral and independent** research centers, non-profit organizations about the latest smart city technologies, standards and innovative applications.
- ▶ Organize events to **exchange best practices, lessons learnt, know-how** with other national and international initiatives.

# Specific Task Groups

- ▶ **Architectural task group** to deal with the technical issues, requirements analysis, interoperable architectures, integration plans among the projects in the group, etc.
- ▶ **Business task group** to promote networking among the members, identify new opportunities and work on new win-win business models.

# Specific Task Groups

- ▶ **Testbed task group** to organize pilot deployments to demonstrate and test solutions in close to real life environments with the help of the member cities.
- ▶ **Social task group** to remind us that the citizen is the center of all the preoccupations, and deal with non-technical issues such as ethics, privacy, design, art, etc.
