

REQUEA

LoRaWAN at High altitude

Refuges on the Mont Blanc

alt 3000m - 4400m

REQUEA

REQUEA

- Founded in 2006
- Software vendor
- Resource Management -> Smart Meters, Smart Buildings, Smart Energy
- Service Portals for distributed systems : Monitoring, Control, Optimization
- Multi communication protocols: LoRa, ModBus, IP, ...

REQUEA

Goals

- Security
 - Cameras with images for actual weather visualisation
 - Temperature and weather measurement with LoRa devices
 - Presence monitoring (LoRa)
- Smart Energy and Smart building
 - Energy monitoring and optimisation
 - Remote access to building management systems

Challenges

LoRa at the Mont Blanc

REQUENA

REQUEA

LoRa In the Lab

REQUEA testing and development station for Multitech gateways.

2017-12-19 17:00:17

LoRa in the Wild

Refuge du Gouter alt 3835m - view from our cameras

REQUEA

Technology at high altitude

REQUENA

- Rule number 1: Everything cannot fail
- Rule number 2: Everything will fail

REQUEA

Extreme Weather

Refuge du Gouter

alt 3835m

A LoRa Antenna

-30C / 200km winds.

REQUEA

Accessibility Challenge

REQUEA

REQUEA

Accessibility challenge

Getting there is complex and
expensive

Need for remote monitoring and
remote control

Problematic IP Backbone

IP coverage is
problematic:

- Satellite: ping 1200ms
- 3G / 4G: when there is coverage, may not be reliable

(4G antenna covered by
ice)

Electrical Power

Off grid electricity not reliable

REQUEA

LoRa is magic

REQUEA

REQUEA

Abri Vallot (alt 4362m)

Refuge du Club Alpin Français
Sur la “voie normale” du Mont Blanc
Abri de secours pour alpinistes en détresse
Non gardé - Posé sur un éperon rocheux
Equipé d'une balise de secours

Objenious network

Mesures with Adeunis FTD testers

REQUEA

REQUEA

REQUEA

LoRa network coverage at 4400m

Public LoRa networks

REQUEA

REQUEA

- “LoRaWAN est l'acronyme de *Long Range Wide-area network* que l'on peut traduire par « réseau étendu à **longue portée** ».
- “La **courbure terrestre** — nommée aussi *dépression* — définit *l'horizon visuel apporté par la rotondité ou sphéricité de la Terre*. Elle limite la vision (théorique) lointaine par exemple sur la mer. Plus **l'altitude du point d'observation**, ou d'émission dans le cas des émetteurs de télévision ou FM, est élevé, **plus la distance de vision est importante**. On parle aussi de **ligne d'horizon visuelle ou hertzienne**.” Wikipedia

Show time

REQUENA

LoRa is disruptive

REQUENA

- LoRa solves problems that could not be solved
AND with a low cost
- Accessibility : Long range Radio Transmission OR Deep in the building
- Weather: Device stands extreme weather relatively easily
- Electricity: Battery powered - no need for external power
- Network: LoRa gives many possibilities to architecture the network

Temperature monitoring at Vallot (4400m)

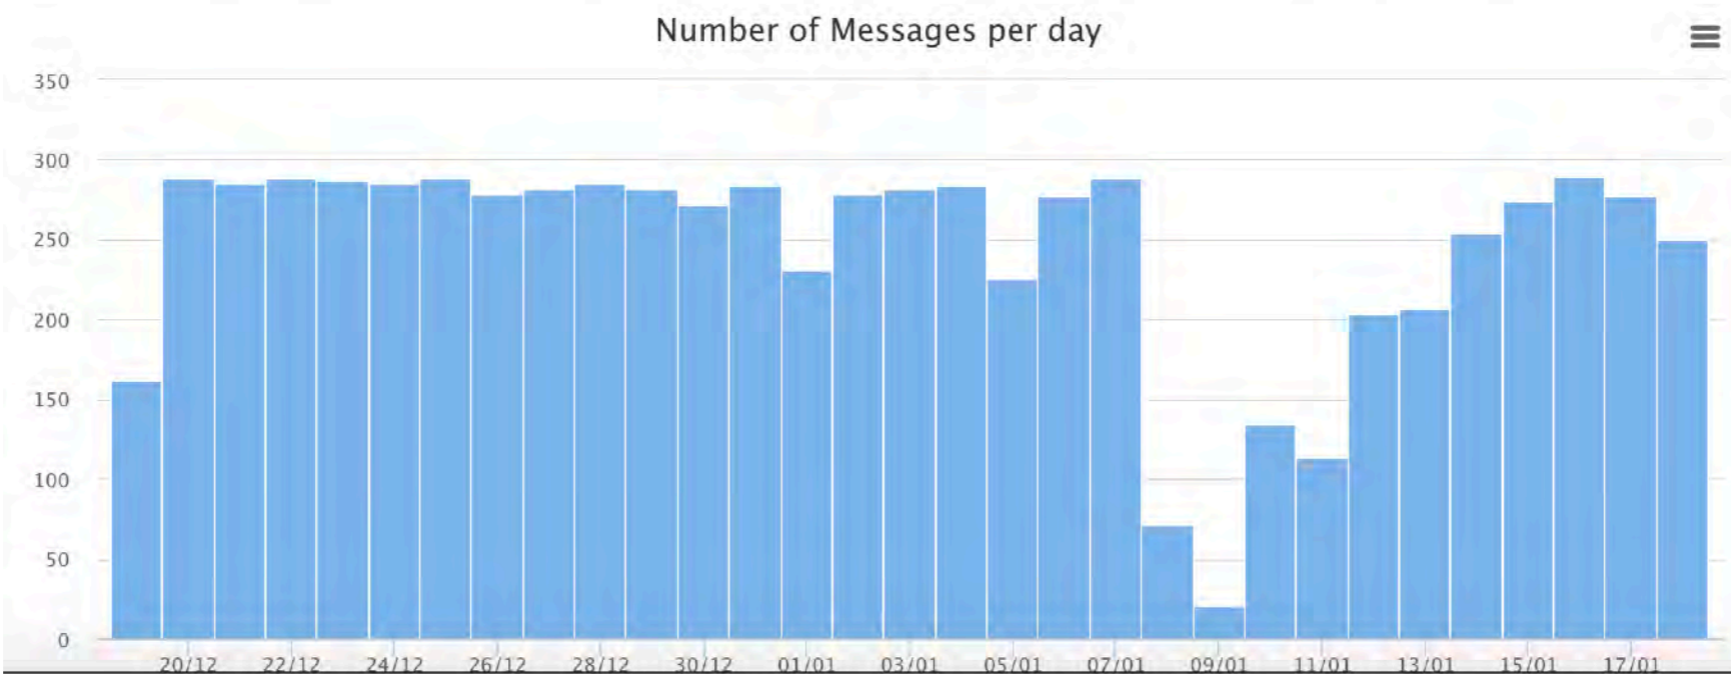

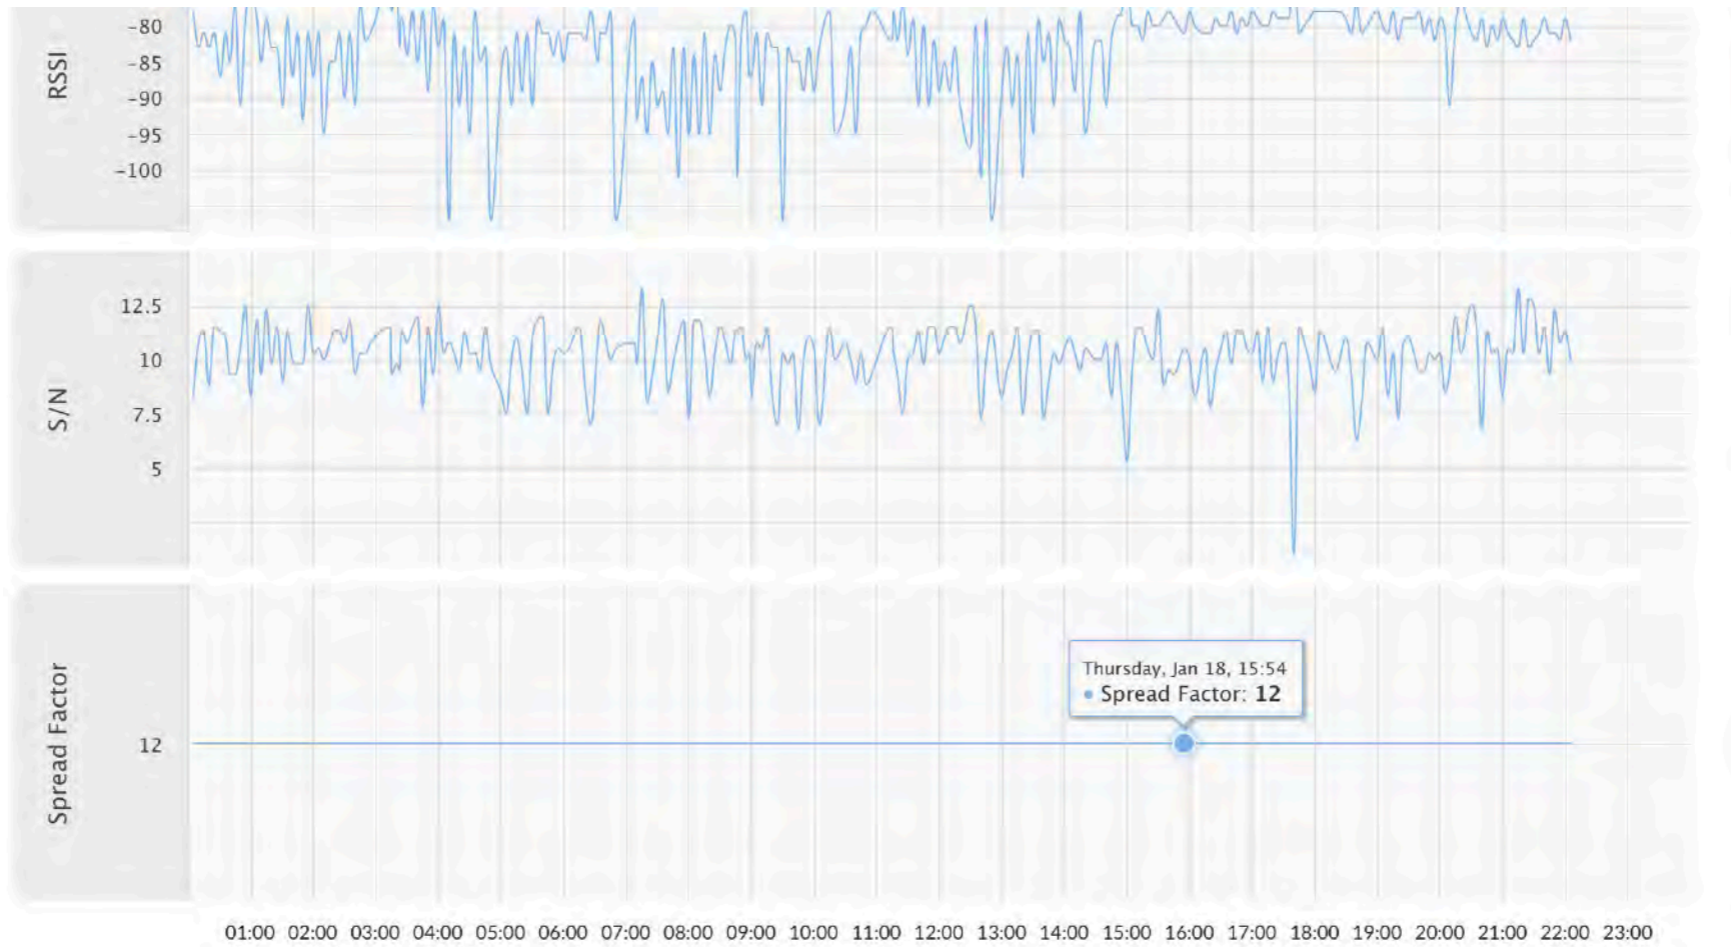

REQUEA

LoRa remains a challenge
(especially at high altitude)

WARNING

May Work \neq Should Work \neq Will Work \neq Must Work

Do not assume that
everything will work !
